This symbol, found on your product or on its packaging, indicates that this product should not be treated as household waste when you wish to dispose of it. Instead, it should be handed over to an applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences to the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resources. For more detailed information about the recycling of this product, please contact your local city office, household waste disposal service or the retail store where you purchased this product.

# 1 Overview

## 1.1 Overview

Along with the development of the Internet, the demand for data communication functions has increased recently. Data communication over the Internet requires using TCP/IP, the Internet communication protocol. That is to say, in order to connect a system to the Internet, TCP/IP protocol must be implemented. It is possible to implement TCP/IP by directly implementing the protocol, porting public TCP/IP, or using Operating System (OS). However, all these methods impose burdens on the developer in time, cost, and technology.

EZI-10 uses Modbus/TCP and HTTP to provide users with ability to control and monitor remote digital I/O controllers. Therefore, with EZI-10, remote I/O devices can easily be controlled and monitored at the same time.

## 1.2 Features

- Remote I/O controller
- 1 x Digital Input Port (photo-coupler interface)
- 1 x Digital Output Port (relay interface)
- Supports Modbus/TCP and HTTP
- Easy configuration program (ezConfigIO)

## 1.3 Components

- EZI-10
- 5V Power Adapter(optional)

## 1.4 Application Diagrams

- 1 to 1 I/O Monitoring and Controlling

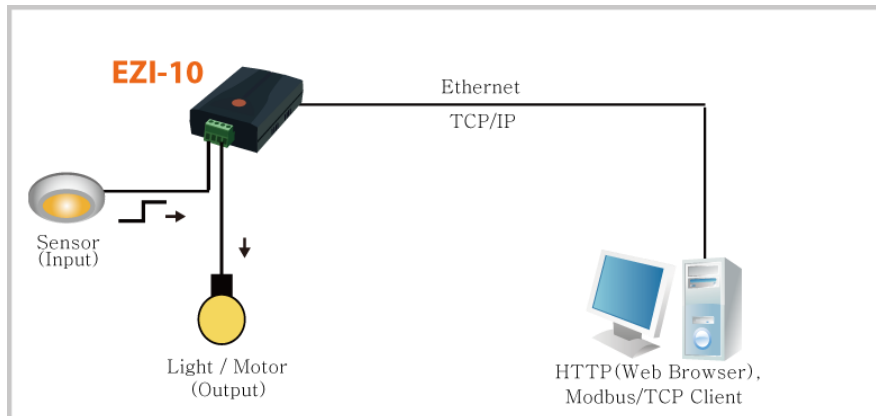

Figure 1-1 1 to 1 I/O Monitoring and Controlling

- Local Network I/O Monitoring and Controlling

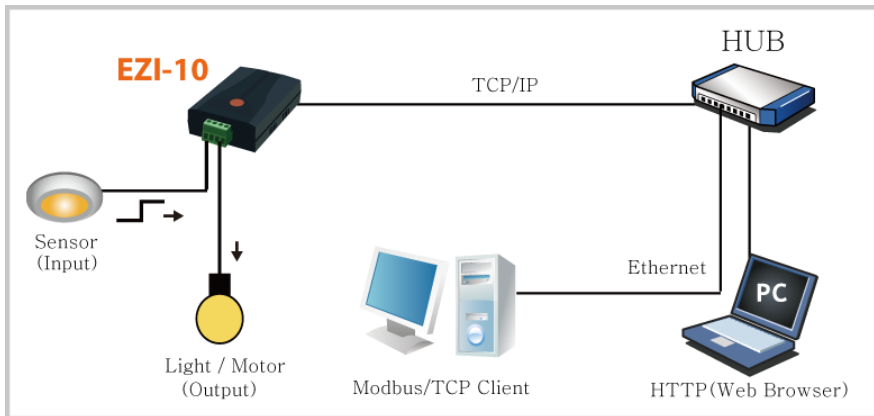

Figure 1-2 Local Network I/O Monitoring and Controlling

## 1.5 Specification

### 1.5.1 Hardware

|             |   |                      |
|-------------|---|----------------------|
| Power       | Input Voltage                           | 5V ( $\pm 5\%$ )     |
|             | Current                                 | 91mA typical         |
| Dimension   | 96mm x 57mm x 24mm                      |                      |
| Weight      | about 78g                               |                      |
| Interface   | Input Port                              | 1 Port Photo Coupler |
|             | Output Port                             | 1 Port Relay         |
|             | Network                                 | 10 Base-T (RJ45)     |
| Temperature | Operate: 0 ~ 55°C / Storage: -40 ~ 85°C |                      |
| Approvals   | MIC                                     |                      |
| RoHS        | RoHS Compliant                          |                      |

Table 1-1 Hardware specification

### 1.5.2 Software

|                    |   |                                    |
|--------------------|---|------------------------------------|
| Protocols          | TCP, UDP, IP, ICMP, ARP, DHCP, Modbus/TCP, HTTP |                                    |
| Operation mode     | Normal  | normal communication mode          |
|                    | ISP   | F/W upgrade mode                   |
| Communication Mode | Modbus/TCP (Master/Slave, Active/Passive), HTTP |                                    |
| Utilities          | ezConfigIO                                      | Configuration utility via LAN      |
|                    | hotflash  | Firmware download utility via TFTP |

Table 1-2 Software specification

 You can download the firmware from our website (<http://www.eztcp.com>).

## 1.6 LED indicators

### 1.6.1 RJ45

There are yellow and green LEDs in the RJ-45 connector of EZI-10. The yellow LED indicates that IP address status of EZI-10 and packet transmissions from LAN port. And the green LED turns on when EZI-10 connected a hub and blinks when packet receptions.

| Mode              | Color         | Status                 | Description  |
|-------------------|---------------|------------------------|--|
| Normal mode       | Green         | Blinks in every second | IP is allocated but TCP connection is not established.   |
|                   |               | Blinks 4 times at once | IP is not allocated – Repetition of [after blinking 4 times for 150ms, turns off during 850ms] |
|                   |               | On                     | Establishing Modbus/TCP Connection   |
|                   |               | Blinks                 | Transmitting data to LAN   |
|                   | Green         | On                     | Being connected with LAN   |
|                   |               | Blinks                 | Receiving data from LAN  |
| ISP mode          | Green /Yellow | Off                    | Entering ISP mode  |
| Network Scan mode | Yellow        | Blinks twice at once   | None heavy network traffic   |
|                   |               | Blinks 3 times at once | Heavy network traffic  |
|                   | Green         | On                     | Being connected with LAN   |

Table 1-3 System LED

### 1.6.2 ISP Switch

There is an ISP switch on the side. If this switch is push 20ms~1s, it operates as Serial Configuration Mode. If this switch is push over 3 seconds, EZI-10 operates as ISP mode. User can do firmware download to the EZI-10 in the ISP mode. Please refer to 4.2 for more information on firmware download.

## 1.7 Interface

### 1.7.1 Input Port

Since EZI-10 input port is isolated by photo-couplers, users may connect the machine regardless of its polarity. The circuit of the input port is shown in the below. It is the part where the [EXTERNAL INPUT1] and [EXTERNAL INPUT2] are interfaced with the user device.

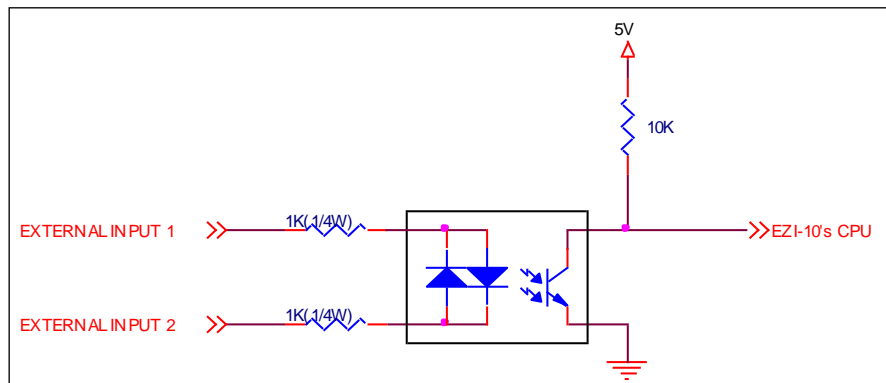

Figure 1-5 Input Port Interface

The specifications of the input port are as the following:

| Max. Input Voltage | DC24V     |   |   |
|--------------------|-----------|---|---|
| $V_{IH}$           | Min. 2.2V | H | 1 |
| $V_{IL}$           | Max. 1.8V | L | 0 |

Table 1-4 Voltage Feature of Input Port

Since the input port is interfaced with a 5mm terminal block, use a (-) shaped screwdriver to connect it with the user device.

- Valid Time  
EZI-10 will only recognize input port signals that last for the [Valid Time] set by the user. If the signal is not maintained during the designated [Valid Time], the input signal will be ignored.  
The [Valid Time] is used for Modbus/TCP, HTTP and other functions provided by EZI-10. The unit used for the [Valid Time] is 1ms. However, since the accuracy is only guaranteed in 10ms, the designated values will round down in units of 10ms according to the designated values by the users.
- Input Port Type  
Basically, input ports of EZI-10 are Open Collector type. The type needs two wires which have difference of voltage level for making HIGH signal.

### 1.7.2 Output Port

EZI-10 output port is interfaced via relay as shown below. It is the part where the [EXTERNAL OUTPUT1] and [EXTERNAL OUTPUT2] are interfaced with the user device.

Figure 1-6 Output Port Interface

The output port will perform the following actions

| Value | Relay contact |
|-------|---------------|
| 0     | OFF           |
| 1     | ON            |

Table 1-5 Status of Output Port

The allowed electrical current based on voltage conditions of the output port are as the following:

| Voltage Condition | Allowed current |
|-------------------|-----------------|
| DC28V             | 5A              |

Table 1-6 Allowed Values of Current

Since the output port is interfaced with a 5mm terminal block, use a (-) shaped screwdriver to connect it with the user device.

- Delay

EZI-10 will send output value to the output port after waiting for [Delay].

In order to do so, the signal value must last for [Delay] seconds. If the output value does not last for the [Delay] seconds, EZI-10 will not send that signal to the output port. If the [Delay] value is set as 0, EZI-10 will send the output value to the output port immediately. The [Delay] is used for Modbus/TCP, HTTP and other functions provided by EZI-10. The unit used for the [Delay] is 1ms. However, since the accuracy is only guaranteed in 10ms, the designated values will round down in units of 10ms according to the designated values by the users.

### 1.7.3 Ethernet Interface

Network part of EZI-10 is configured with Ethernet. So, what you have to do is only to connect UTP cable.

Each piece of Ethernet equipment has unique hardware addresses, and EZI-10 also has factory-set hardware address (which is called MAC address)

Figure 1-7 RJ45 Ethernet connector

| Number | Name | Direction |
|--------|------|-----------|
| 1      | Tx+  | Output    |
| 2      | Tx-  | Output    |
| 3      | Rx+  | Input     |
| 4      | -    | -         |
| 5      | -    | -         |
| 6      | Rx-  | Input     |
| 7      | -    | -         |
| 8      | -    | -         |

Table 1-7 Ethernet port pin description

### 1.7.4 Power

DC5V is used for EZI-10 and the specification is below:

Figure 1-8 DC 5V Power Jack

## 2 Getting Started

### 2.1 Installation Method

You can install EZI-10 in the following steps.

| Title                                       | Item                 | Sub-item  |
|---|----------------------|---|
| 1. Checking the communication environment   | Check items          | IP address environment  |
|   |                      | Serial port parameters  |
|   |                      | Application program to be used                                      |
| 2. Connecting to the network                | Check method         | Check the LINK LED  |
| 3. Configuring the environmental parameters | Configuration method | Set by ezConfigIO, a program for configuration through the network. |
| 4. Test run                                 | Check method         | Modbus/TCP or HTTP  |
| 5. Application to the system                | -                    | -   |

Table 2-1 Installation steps of EZI-10

#### 2.1.1 Checking the Communication Environment

Before installing EZI-10, check the network environment where EZI-10 is to be installed, including the followings matters:

- IP address environment (local IP, subnet mask, gateway, DHCP/PPPoE etc.)
- Application program protocol to be used (Modbus/TCP, Master/Slave, etc.)

#### 2.1.2 Connecting to the Network

Connect power to EZI-10, and connect EZI-10 either directly to the Ethernet port of the PC where test is to be performed or to the network (hub) to which the PC is connected.

#### 2.1.3 Configuring the Environmental Variables

When network connection is completed, configure the environmental variables such as IP address related items and communication mode related items through the LAN using "ezConfigIO" the environmental variable configuration program.

### 2.2 Test Run

You can perform test run according to the following orders. The test run described here is based on the assumption that the IP address of the PC is set to 10.1.0.2.

## 2.2.1 Changing IP Address of PC

You should change or add an IP address of your PC as follows:

|                    |           |
|--------------------|-----------|
| IP Address         | 10.1.0.2  |
| Subnet Mask        | 255.0.0.0 |
| Gateway IP Address | -         |

Table 2-2 IP address of PC

## 2.2.2 Installing EZI-10

Connect the LAN cable to the hub to which the PC is connected or directly to the PC, and the supplied EZI-10 power adapter to EZI-10 for power supply. If the LAN cable has been correctly connected when power is supplied, green LED of RJ45 connector will turn on.

## 2.2.3 Configuring EZI-10

Configure EZI-10 setting using ezConfigIO, the ezTCP configuration program, as follows. Run ezConfigIO, and click [Search All] button in the ezConfigIO window. And, ezConfigIO program will search all EZI-10s on the local network. When ezTCP is searched, MAC address of the ezTCP is displayed on the [Search Result] window (The MAC address is indicated at the bottom of the product case). Select the corresponding MAC address, and set the variables considering your network environment. When no ezTCP is found, check the Windows firewall. If you press [Windows Firewall] button in the ezConfigIO, you can see the Windows Firewall menu directly. For simple test, we recommend that the variables keep default values as shown in the below table.

| Parameters                |                    | Values    |
|---------------------------|--------------------|-----------|
| Network                   | Local IP Address   | 10.1.0.1  |
|                           | Subnet Mask        | 255.0.0.0 |
| Option                    | MAC Address Search | Checked   |
|                           | IP Address Search  | Checked   |
| TCP/IP                    | Communication Mode | HTTP      |
|                           | Local Port         | 80        |
|                           | Allowed IP Address | 0.0.0.0   |
| Digital Input<br>/ Output | Valid Time         | 0         |
|                           | Delay Time         | 0         |
|                           | Initial State      | Off       |

Table 2-3 Default values of major parameters

## 2.2.4 HTTP Test

EZI-10 supports HTTP, so it is possible to access to EZI-10 through web browsers like MS Internet Explorer, Google Chrome, Mozilla Firefox and etc.

Setting of EZI-10's parameters for simple test are followed

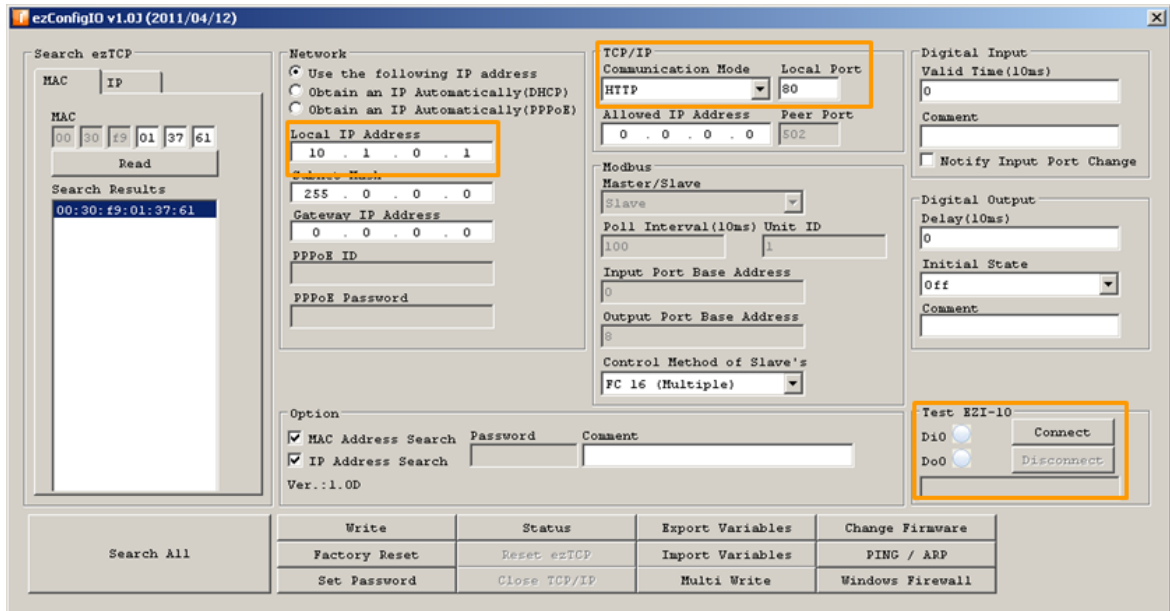

Figure 2-1 Setting for HTTP test

- Network part  
Local IP Address can be set according to your network environment.
- TCP/IP part  
Select [HTTP] as [Communication Mode], and check if the local port number is 80.
- EZI-10 Test Program  
On the right side of bottom, there is EZI-10 Test program. Users can do the test with HTTP or Modbus/TCP using this program.

When the values are properly set, if you press the [Connect] button, a window will be created like below figure.

Figure 2-2 HTTP Test via ezConfigIO

- Verify the operations with [Read] and [Write] buttons.

☞ *Users also can do that via web browsers like MS Internet Explorer, Google Chrome and etc.*

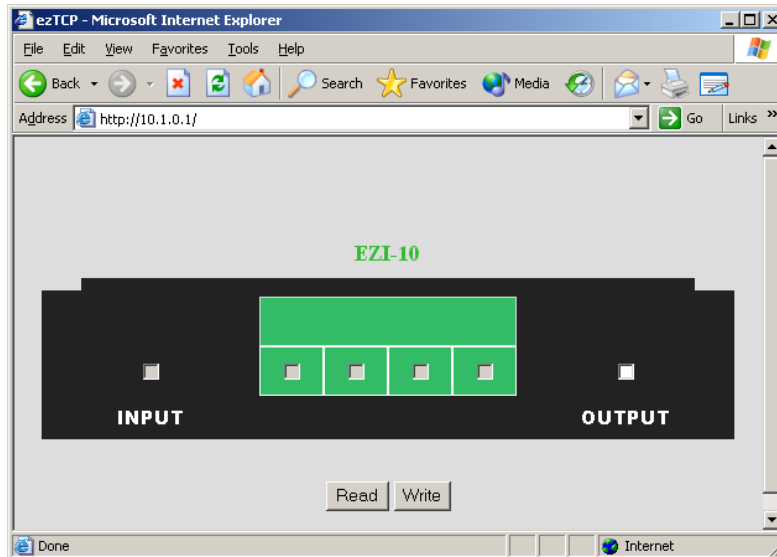

Figure 2-3 HTTP Test via MS Internet Explorer 6

### 2.2.5 Modbus/TCP Test

Setting is followed for Modbus/TCP test. In this test, EZI-10 operates as Modbus/TCP Slave.

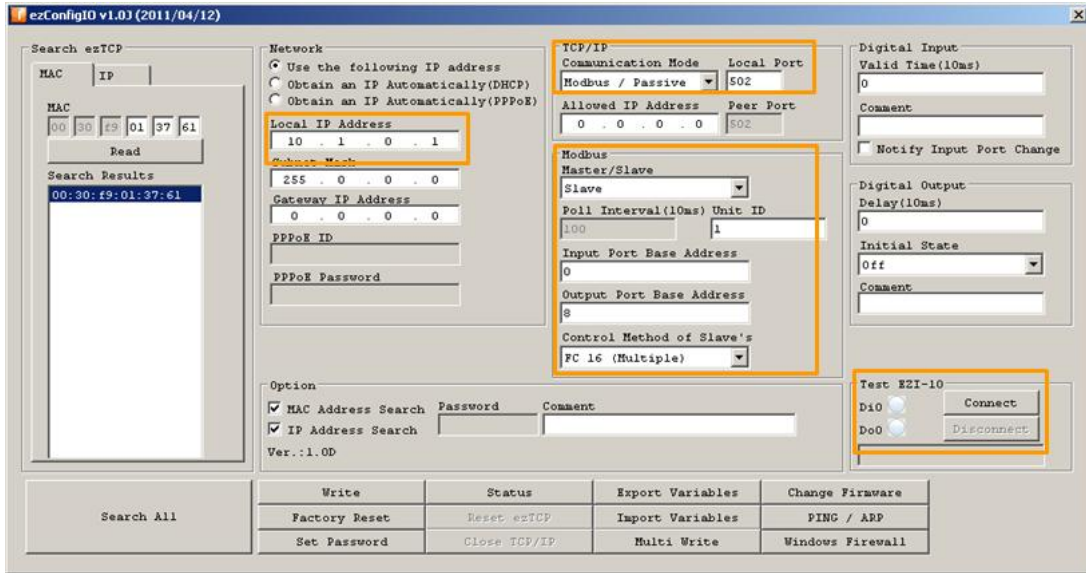

Figure 2-4 Settings for Modbus/TCP Test

- Network Part  
Local IP Address can be set according to your network environment.
- TCP/IP Part  
Select [Modbus / Passive] as a value of Communication Mod, then the local port will be set as 502 automatically.  
Check if the [Allowed IP Address] is [0.0.0.0].
- Modbus Part  
Select [Slave] on [Master / Slave] item.  
Default value of [Unit ID] is 1  
Each [Input Port Base Address] and [Output Port Base Address] should be set 0 and 8.
- Press the [Connect] button after then saving the parameters with [Write] button.
- You can see the message like this

Figure 2-5 "Connected" message

## 3 Configuration

### 3.1 IP Address and Environmental Variables

For TCP/IP communication, you must set IP address related items to EZI-10.

You can set the IP address and related items by using ezConfigIO, the supplied configuration utility which allows you to configure your EZI-10 over the network.

### 3.2 Configuring with ezConfigIO

#### 3.2.1 ezConfigIO

The basic environmental variables (IP address related items, serial port items, and etc.) can be set by ezConfigIO which is an integrated management tool for Windows. The ezConfigIO is operated in Microsoft Windows (Windows 2000 Pro, ME, XP Pro/Home, Vista). Following is the screen shot of ezConfigIO which is just launched.

Figure 3-1 Initial window of the ezConfigIO

### 3.2.2 Buttons of ezConfigIO

| Button           | Description  |
|------------------|--|
| Search All       | Search and read the parameters of all EZI-10 which are in the local network. |
| Read             | Read the parameters of EZI-10 with MAC or IP address                         |
| Write            | Write the present settings to EZI-10   |
| Set Password     | Set or change password   |
| Status           | Check status of EZI-10 in real time.   |
| Factory Reset    | Initialize all the parameters to its default values                          |
| Change Firmware  | Download Firmware of EZI-10  |
| Export Variables | Store a set of values as a file.   |
| Import Variables | Load values from a file made from [Export Variables]                         |
| Multi Write      | Configure a set of values to one or more ezTCP                               |
| PING / ARP       | Send PING request and management ARP table                                   |
| Windows Firewall | Go to window which is for firewall setting.                                  |

Table 3-1 Buttons of ezConfigIO

### 3.2.3 Parameters of ezConfigIO

| Section        | Parameter                      | Description   |                                 |
|----------------|--------------------------------|---|---------------------------------|
| Network        | Use the following IP Address   | Set IP address manually.                                      |                                 |
|                | Obtain an IP Automatically     | DHCP  | Obtain IP address through DHCP  |
|                |                                | PPPoE   | Obtain IP address through PPPoE |
|                | Local IP Address               | EZI-10's Local IP address                                     |                                 |
|                | Subnet Mask                    | subnet mask address   |                                 |
|                | Gateway IP Address             | gateway's IP address  |                                 |
|                | PPPoE ID                       | Input PPPoE account's ID                                      |                                 |
| PPPoE Password | Input PPPoE account's password |   |                                 |
| Option         | MAC Address Search             | Enable or disable MAC address search with [Search All] button |                                 |
|                | IP Address Search              | Enable or disable IP address search with [Read] button        |                                 |
|                | Ver.                           | Indicate version of F/W which is used now                     |                                 |
|                | Password                       | For input password which is set in advance                    |                                 |
|                | Comment                        | Input comment for easy identification                         |                                 |

|                |  |   |
|----------------|--|---|
| TCP/IP         | Communication Mode                     | Select method for controlling I/O Port. HTTP, Modbus/TCP Active and Passive are available.    |
|                | Allowed IP Address                     | Enabled only HTTP and Modbus/TCP Passive mode.<br>It presents IP address for allow to access. |
|                | Peer IP Address                        | Enabled only Active mode.<br>Input peer's IP Address.   |
|                | Local Port                             | Enabled only Passive mode.  |
|                | Peer Port                              | Enabled only Active mode.<br>Input peer's local port.   |
| Modbus         | Master/Slave                           | Select Modbus/TCP operation mode. Both Master and Slave are available.                        |
|                | Poll Interval                          | Enabled only Master mode.<br>Period of sending Modbus queries. (Unit: 10ms)                   |
|                | Unit ID                                | Slave mode: EZI-10's Unit ID<br>Master mode: EZI-10 and remote device Unit ID                 |
|                | Input Port Base Address                | Reference Address for Input Port  |
|                | Output Port Base Address               | Reference Address for Output port   |
|                | Control Method of Slave's output ports | FC 16(Multiple) / FC 05(Single)   |
| Digital Input  | Valid Time                             | Valid time to recognizing input signal. (Unit: 10ms)  |
|                | Comment                                | Comment for input port  |
|                | Notify Input Port Change               | Immediately sending status of slave's input port.   |
| Digital Output | Delay                                  | Delay time to reflecting output.<br>(Unit: 10ms)  |
|                | Initial State                          | Initial state when EZI-10 boots up.   |
|                | Comment                                | Comment for output port   |

Table 3-2 Parameters of ezConfigIO

☞ ***For the details of using and setting Modbus/TCP, please refer to the document "Modbus/TCP of ezTCP" on the [Download] >> [Technical Documents] page of our website.***

## 4 System Management

### 4.1 Operation Mode

EZI-10 can operate in one of three modes (normal, ISP and network scan mode). Normal mode is ordinary data communication mode. ISP mode is used to download EZI-10 firmware through the Ethernet port.

#### 4.1.1 Normal mode

The normal mode is an operation mode that EZI-10's works for normal purposes. If EZI-10 boots up without any other treatment, it works in the normal mode.

#### 4.1.2 ISP Mode

If you press the switch on the side of the body in the normal mode over 3 seconds, it works in the ISP mode. You can download new firmware to EZI-10 with ezConfigIO or hotflash program that is a TFTP client through the Ethernet. And you can configure the EZI-10 in the ISP mode even though you forget its password or you can't access the EZI-10 because the [MAC address search] or [IP address search] function is enabled. (All security functions are disabled in the ISP mode)

#### 4.1.3 Network Scan Mode

If network traffic is so heavy, EZI-10 may not operate normally. For figure it out, EZI-10 supports [Network Scan Mode]. This mode let you know that EZI-10 is capable of operation in your network.

To initiate this mode, you can press the ISP button less than 1 second. If the Yellow LED, which is on the RJ45 connector, blinks twice or three times at once.

Twice blinking means the network traffic may not cause any problem to EZI-10.

Three times blinking means the network traffic has probability of causing problems. In this case, you should test with EZI-10 before applying it to your system.

### 4.1.4 Comparison between two modes

The following is a comparison between the normal mode and the ISP mode.

| Mode         | How to initiate                                 | Description   |
|--------------|---|---|
| Normal       | Power on EZI-10 without pressing the ISP button | Normal communication mode                                     |
| ISP          | Pressing the ISP button over 3 seconds          | Firmware download mode<br>All security functions are disabled |
| Network Scan | Pressing the ISP button less than 1 second      | Test for applying to your network.                            |

Table 4-1 Operation Mode

## 4.2 Upgrading Firmware

In ISP mode, you can download a firmware (EZI-10 operation software) provided by our company. There is another thing in this mode. If you forget your password set before, you can reset it by entering this mode. In ISP mode, all the security options including disabling MAC and IP address search can be removal.

The following is the firmware downloading procedure.

- Supply power with pressing ISP button or push the button over 3 seconds, then EZI-10 will operate in ISP mode. The yellow LED will blink rapidly.
- Run ezConfigIO. Search the product and select its MAC address on the search result box. Then, press the [Change Firmware] button.

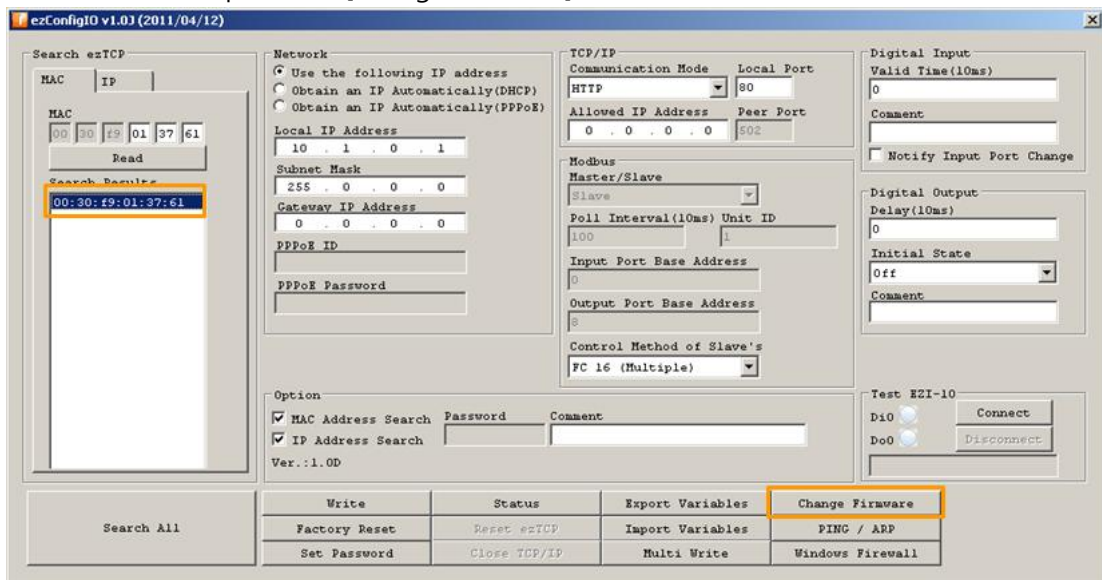

Figure 4-1 [Change Firmware] button

- You can see new windows like below figure.

Figure 4-2 [Firmware] button for select a firmware file

- Press [Firmware] button and then, choose and select a firmware file.

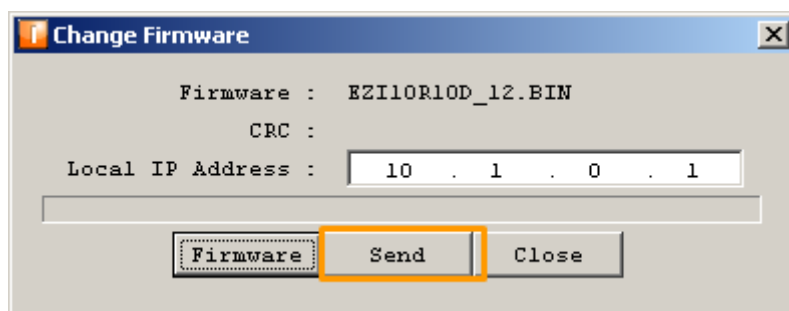

Figure 4-3 [Send] button

- Press [Send] button and wait until the download is completed.

Figure 4-4 Complete message

- When the downloading is completed, EZI-10 automatically reboots and enters normal mode.

*The downloading firmware is possible with another TFTP Client like hotflash.*

## 4.3 Checking current status

### 4.3.1 Status on ezConfigIO

Users can monitor status of EZI-10 with ezConfigIO. Press the [Status] button after select your product. If you check the [Refresh Every 1 Second] option, the status will be refreshed automatically in every second.

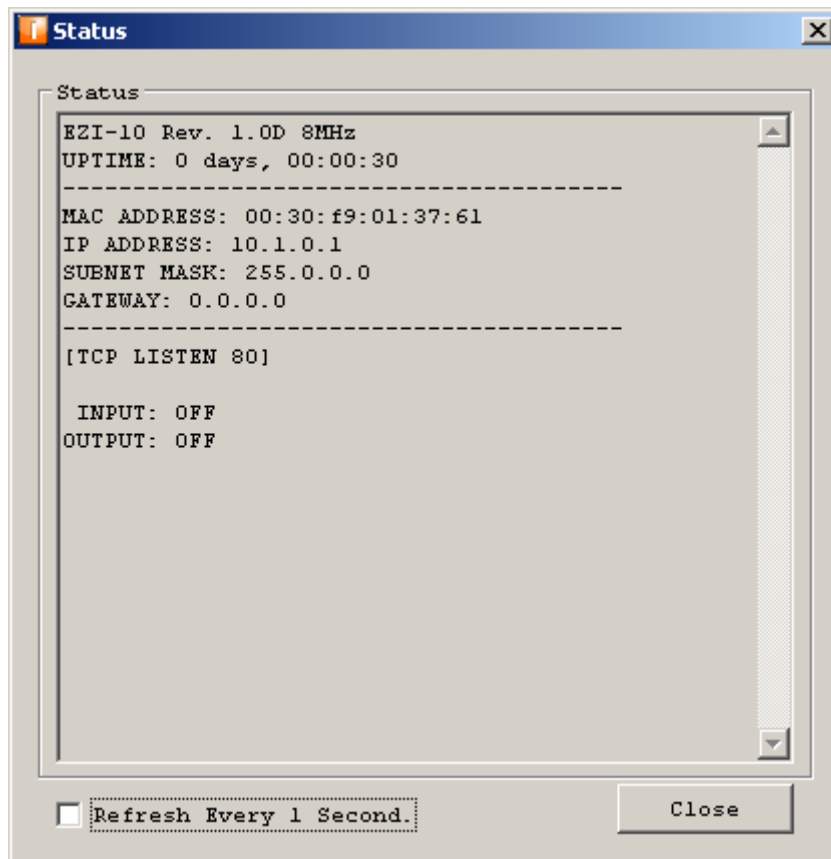

Figure 4-5 Status window of ezConfigIO

## 5 Other Options

### 5.1 Security

#### 5.1.1 Setting Password

EZI-10 supports setting password option for blocking access from anyone who should not access to the product. The password has to be character or numeral between the number of 4 and 8 ciphers.

Once the password is set, you should remember the value and input it to the [Password] box before pressing [Write] button.

Figure 5-1 Setting Password

#### 5.1.2 Allowed IP address

When you use HTTP or Modbus/TCP as the communication mode, EZI-10 will listen for a connection from remote hosts. This option is for designating one IP address to block accesses from other addresses.

Figure 5-2 Allowed IP Address option

## 5.2 Factory Reset

There are two ways to initiate all the parameters to its default values. The one way is using [Factory Reset] button on ezConfigIO and the other way is using ISP switch.

Purposes of both methods are same.

### 5.2.1 Initialization with ISP button

To use this method, you can change the mode of EZI-10 to [Network Scan Mode]. This mode is mentioned above. To enter this mode, press the ISP button less than 1 second.

If the yellow LED is blinking twice or three times at once, the changing is succeeded. In this state, press the ISP button again over 10 seconds. If the yellow LED is blinking in every second, all the parameters will have been initiated.

## 6 Technical Support and Warranty

### 6.1 Technical Support

If you have any question regarding operation of the product, visit Customer Support FAQ corner and the message board on Sollae Systems' web site or send us an email at the following address:

- E-mail: [support@eztcp.com](mailto:support@eztcp.com)
- Website Address for Customer Support: <http://www.eztcp.com/en/support/>

### 6.2 Warranty

#### 6.2.1 Refund

Upon the customer's request to refund the product within two weeks after purchase, Sollae Systems will refund the product.

#### 6.2.2 Free Repair Services

For product failures occurring within 2 years after purchase, Sollae Systems provides free repair services or exchange the product. However, if the product failure is due to user's fault, repair service fees will be charged or the product will be replaced at user's expense.

#### 6.2.3 Charged Repair Services

For product failures occurring after the warranty period (2 years) or resulting from user's fault, repair service fees will be charged and the product will be replaced at user's expense.

## 7 Precaution and Exemption from Liability

### 7.1 Precaution

- Sollae Systems is not responsible for product failures occurring due to user's alteration of the product.
- Specifications of the product are subject to change without prior notice for performance improvement.
- Sollae Systems does not guarantee successful operation of the product if the product was used under conditions deviating from the product specifications.
- Reverse engineering of firmware and applications provided by Sollae Systems is prohibited.
- Use of firmware and applications provided by Sollae Systems for purposes other than those for which they were designed is prohibited.
- Do not use the product in an extremely cold or hot place or in a place where vibration is severe.
- Do not use the product in an environment in which humidity is high or a lot of oil exists.
- Do not use the product where there is caustic or combustible gas.
- Sollae Systems does not guarantee normal operation of the product under the conditions a lot of noise exists.
- Do not use the product for a purpose that requires exceptional quality and reliability relating to user's injuries or accidents – aerospace, aviation, health care, nuclear power, transportation, and safety purposes.
- Sollae Systems is not responsible for any accident or damage occurring while using the product.

## 7.2 Exemption from Liability

### 7.2.1 English version

In no event shall Sollae Systems Co., Ltd. And its distributors be liable for any damages whatsoever (including, without limitation, damages for loss of profit, operating cost for commercial interruption, loss of information, or any other financial loss) from the use or inability to use the EZI-10 even if Sollae Systems Co., Ltd. Or its distributors have been informed of such damages.

The EZI-10 is not designed and not authorized for use in military applications, in nuclear applications, in airport applications or for use in applications involving explosives, or in medical applications, or for use in security alarm, or for use in a fire alarm, or in applications involving elevators, or in embedded applications in vehicles such as but not limited to cars, planes, trucks, boats, aircraft, helicopters, etc..

In the same way, the EZI-10 is not designed, or intended, or authorized to test, develop, or be built into applications where failure could create a dangerous situation that may result in financial losses, damage to property, personal injury, or the death of people or animals. If you use the EZI-10 voluntarily or involuntarily for such unauthorized applications, you agree to subtract Sollae Systems Co., Ltd. And its distributors from all liability for any claim for compensation.

Sollae Systems Co., Ltd. And its distributors entire liability and your exclusive remedy shall be Sollae Systems Co., Ltd. And its distributors option for the return of the price paid for, or repair, or replacement of the EZI-10.

Sollae Systems Co., Ltd. And its distributors disclaim all other warranties, either expressed or implied, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose, with respect to the EZI-10 including accompanying written material, hardware and firmware.

### 7.2.2 French version

- Documentation

La documentation du boîtier EZI-10 est conçue avec la plus grande attention. Tous les efforts ont été mis en œuvre pour éviter les anomalies. Toutefois, nous ne pouvons garantir que cette documentation soit à 100% exempt de toute erreur. Les informations présentes dans cette documentation sont données à titre indicatif. Les caractéristiques techniques peuvent changer à tout moment sans aucun préavis dans le but d'améliorer la qualité et les possibilités des produits.

- Copyright et appellations commerciales

Toutes les marques, les procédés, les références et les appellations commerciales des produits cités dans la documentation appartiennent à leur propriétaire et Fabricant respectif.

- Conditions d'utilisations et limite de responsabilité

En aucun cas Sollae Systems Co., Ltd. ou un de ses distributeurs ne pourra être tenu responsable de dommages quels qu'ils soient (intégrant, mais sans limitation, les dommages pour perte de bénéfice commercial, interruption d'exploitation commerciale, perte d'informations et de données à caractère commercial ou de toute autre perte financière) provenant de l'utilisation ou de l'incapacité à pouvoir utiliser le boîtier CIE-H12, même si Sollae Systems Co., Ltd. ou un de ses distributeurs a été informé de la possibilité de tels dommages.

Le boîtier EZI-10 est exclusivement prévu pour un usage en intérieur, dans un environnement sec, tempéré (+10 °C à +40°C) et non poussiéreux. Le boîtier EZI-10 n'est pas prévu, ni autorisé pour être utilisé en extérieur, ni de façon embarquée dans des engins mobiles de quelque nature que ce soit (voiture, camion, train, avion, etc...), ni en milieu explosif, ni dans des enceintes nucléaires, ni dans des ascenseurs, ni dans des aéroports, ni dans des enceintes hospitaliers, ni pour des applications à caractère médical, ni dans des dispositifs de détection et d'alerte anti-intrusion, ni dans des dispositifs de détection et d'alerte anti-incendie, ni dans des dispositifs d'alarme GTC, ni pour des applications militaires.

De même, le boîtier EZI-10 n'est pas conçu, ni destiné, ni autorisé pour expérimenter, développer ou être intégré au sein d'applications dans lesquelles une défaillance de celui-ci pourrait créer une situation dangereuse pouvant entraîner des pertes financières, des dégâts matériel, des blessures corporelles ou la mort de personnes ou d'animaux. Si vous utilisez le boîtier EZI-10 volontairement ou involontairement pour de telles applications non autorisées, vous vous engagez à soustraire Sollae Systems Co., Ltd. et ses distributeurs de toute responsabilité et de toute demande de dédommagement.

En cas de litige, l'entière responsabilité de Sollae Systems Co., Ltd. et de ses distributeurs vis-à-vis de votre recours durant la période de garantie se limitera exclusivement selon le choix de Sollae Systems Co., Ltd. et de ses distributeurs au remboursement de votre produit ou de sa réparation ou de son échange. Sollae Systems Co., Ltd. et ses distributeurs démentent toutes autres garanties, exprimées ou implicites.

Tous les boîtiers EZI-10 sont testés avant expédition. Toute utilisation en dehors des spécifications et limites indiquées dans cette documentation ainsi que les court-circuit, les chocs, les utilisations non autorisées, pourront affecter la fiabilité, créer des dysfonctionnements et/ou la destruction du boîtier EZI-10 sans que la responsabilité de Sollae Systems Co., Ltd. et de ses distributeurs ne puissent être mise en cause, ni que le boîtier EZI-10 puisse être échangé au titre de la garantie.

- Rappel sur l'évacuation des équipements électroniques usagés

Le symbole de la poubelle barré présent sur le boîtier EZI-10 indique que vous ne pouvez pas vous débarrasser de ce dernier de la même façon que vos déchets courants. Au contraire, vous êtes responsable de l'évacuation du boîtier EZI-10 lorsqu'il arrive en fin de vie (ou qu'il est hors d'usage) et à cet effet, vous êtes tenu de le remettre à un point de collecte agréé pour le recyclage des équipements électriques et électroniques usagés. Le tri, l'évacuation et le recyclage séparés de vos équipements usagés permettent de préserver les ressources naturelles et de s'assurer que ces équipements sont recyclés dans le respect de la santé humaine et de l'environnement. Pour plus d'informations sur les lieux de collecte des équipements électroniques usagés, contacter votre mairie ou votre service local de traitement des déchets.
